## DISCOVER

From time to time, one discovers a piece of equipment that redefines the standards of quality, durability, and functional performance. The Arctic Oven Tent is one of those rare finds. ALASKA TENT & TARP has combined proven design, superior materials, and quality craftsmanship to create a truly "no compromise," all-season tent.

ALASKA TENT & TARP has over 60 years of experience in the design and manufacture of fabric shelters. We recognize that your tent is your home-away-from-home in the wilderness. Not only should it provide you with shelter from nature's tantrums, it should comfort your mind and allow you to relax. So, whether you're snowmobiling across Alaska and Canada or chasing game on Kodiak Island, rest-assured that you'll be comfortable and secure.

## STRUCTURE

The most critical component of any tent is its structure. We utilize rugged, thick-walled, drawn aluminum tubing and durable hub fittings for all Arctic Oven frame sets. Shock corded with sturdy, 1/4" arctic grade bungee, our self-supporting frames flex to absorb and dissipate stress while providing unyielding stability against high winds and heavy snow loads.

## Weatherproofness

Weatherproofness is the sum of both design and fabric choices. All Arctic Ovens utilize double wall construction. Our full coverage flies and bathtub floors are handcrafted with heavy-duty, 4oz coated oxford nylon to fend off outside moisture. While our Vapex™ polypropylene bodies allow moisture-laden interior air to escape. Bottom line – you stay dry.

## Unique

Vapex™ polypropylene fabric, made specifically for ALASKA TENT & TARP, is a multi-ply, spun-bond polypropylene composite with a huge Water Vapor Transmission Rate (WVTR). Highly water repellent, and extremely breathable, Vapex™ is the engine behind the Arctic Oven's condensation-free interior.

## Livability

We design our tents for outdoors-people who want to enjoy, not just endure, the outdoors. Steep side walls provide ample head and shoulder room while usable interior space is maximized with open floor designs and convenient storage pockets and utility loops. We use white, Vapex™ bodies to create bright, sociable interiors.

## Ventilation

Tents need lots of cross-ventilation to eliminate carbon monoxide buildup. Arctic Oven tents include adjustable, high and low tubular vents that provide flow-through ventilation and assist in maintaining a comfortable and healthy living space.

## Setup

We know how important it is to be able to quickly pitch a tent and get inside. Arctic Oven Tents are intuitively simple and quick to set up, even in adverse conditions one person can handle the task. Abundant storm guy out rings and web loops provide essential anchoring points.

## Heating

When you're cold and wet, nothing feels better than to get out of the weather and into a warm shelter. With the exception of the Backwoods, Arctic Oven Tents include high temperature silicone fabric stove jacks and removable Velcro flap. Get inside, fire up the Arctic Oven wood stove and relax in your cozy sanctuary from the storm.

## Details

Every detail should put an exclamation point on your comfort and security. We use sturdy #10 YKK zippers, arctic grade bungee, high strength webbing, arctic grade vinyl reinforcements...the point is details make the difference.

## Alaska

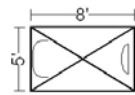

When you experience the outdoors in Alaska, you play by different rules. Standard-grade tents commonly used in less demanding environments just don't cut it. Backed by over 60 years of experience in the heart of Alaska's wilderness, ALASKA TENT & TARP has put tremendous energy into developing and manufacturing the best all-season, "no compromise" tent available.

For those of you who've never experienced the raw satisfaction of basic creature comforts in the wilderness, ALASKA TENT & TARP would like to let you in on Alaska's best kept secret...the Arctic Oven Tent.
